JIRA LAB 2

Warehouse Inventory & Pallet Location Tracker

NAME:ADITYA B JAMBAGI
SRN:PES2UG24CS030

Sprint Planning, Execution and Reporting

Submission Evidence Report

Prepared from the 9 Jira screenshots supplied for the assignment.

Project evidence includes epics, backlog, work-item details, sprint board, completed sprint, burndown, velocity, Sprint 2 planning, and summary reporting.

1. Project Overview

The Jira space shown in the evidence is **Warehouse Inventory & Pallet Location Tracker**. The work is organized into four main epics: Inventory Management, Pallet Management, Pallet Location Tracking, and Inventory Monitoring and Reporting.

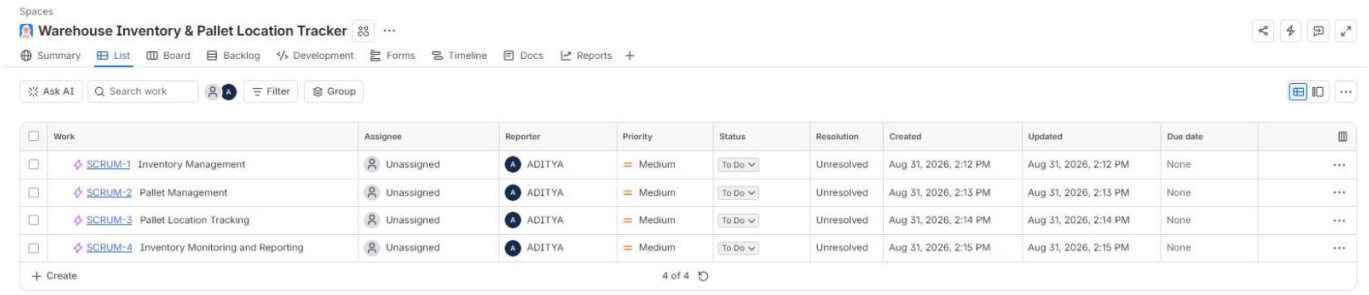

2. Evidence of Jira Configuration and Work Items

The screenshots demonstrate that the project contains epics and stories, uses story-point estimation, assigns priorities, tracks workflow status, groups stories under parent epics, and uses Scrum sprint planning and reporting.

3. Sprint and Reporting Evidence

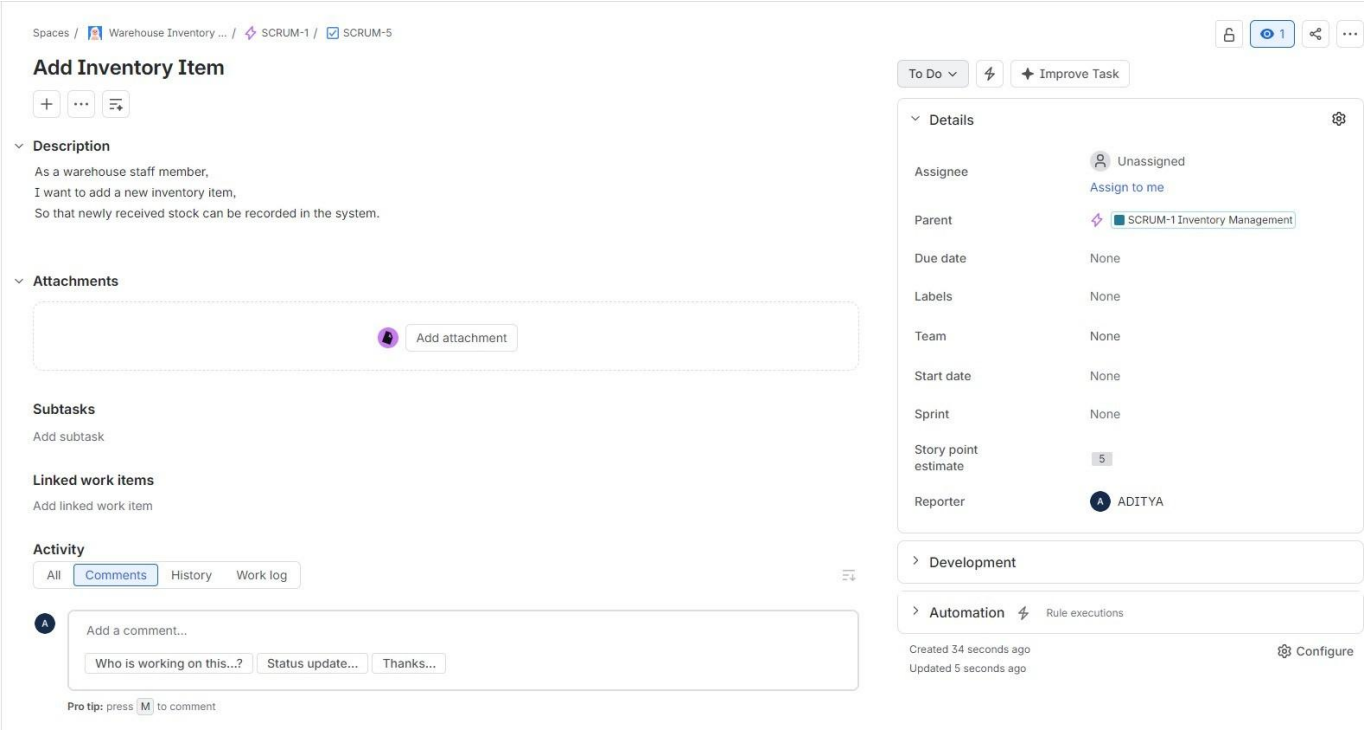

Sprint 1 is shown with planned work, workflow movement, completion, a burndown chart, and a velocity report. The evidence also shows the remaining backlog being prepared for Sprint 2 and a space-level summary dashboard.

Figure 1 – Jira List View

Shows the four epics: Inventory Management, Pallet Management, Pallet Location Tracking, and Inventory Monitoring and Reporting, with their priorities and statuses.

Figure 2 – Add Inventory Item Work Item

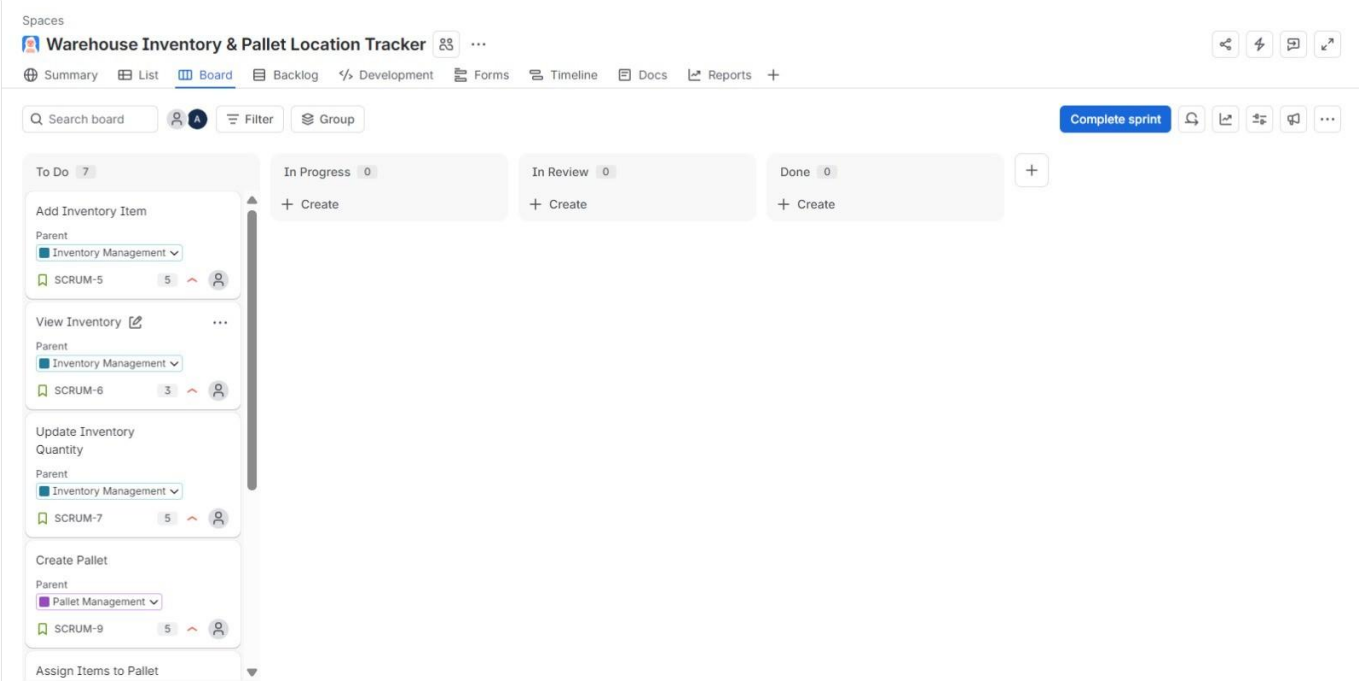

Shows the Add Inventory Item work item (SCRUM-5), its parent epic, story-point estimate, description, reporter, and other Jira details.

Figure 3 – Sprint Backlog

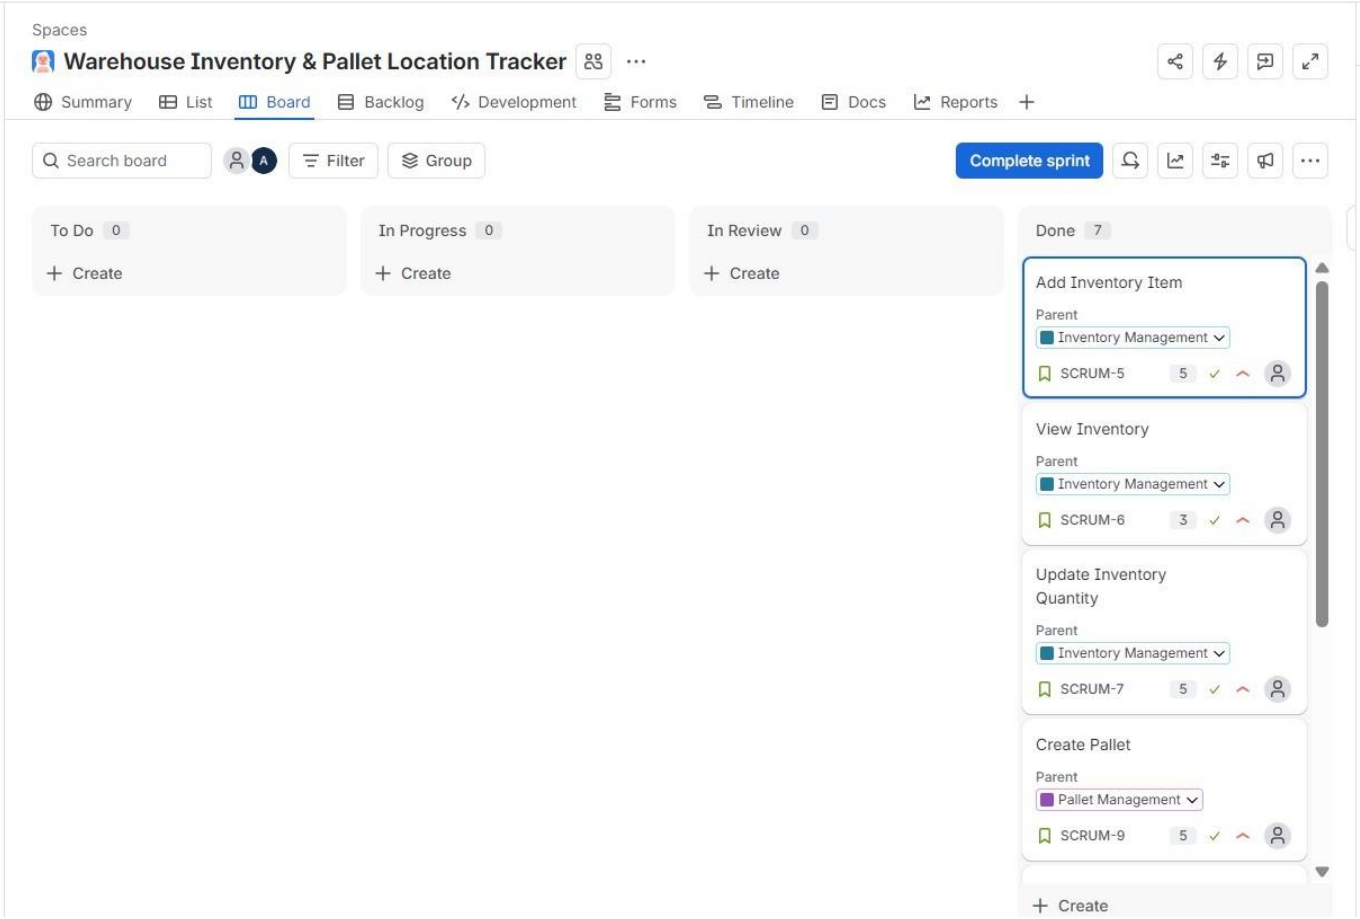

Shows the 13-work-item backlog with the planned stories, parent epics, statuses, and story-point estimates.

Figure 4 – Sprint Board Before Completion

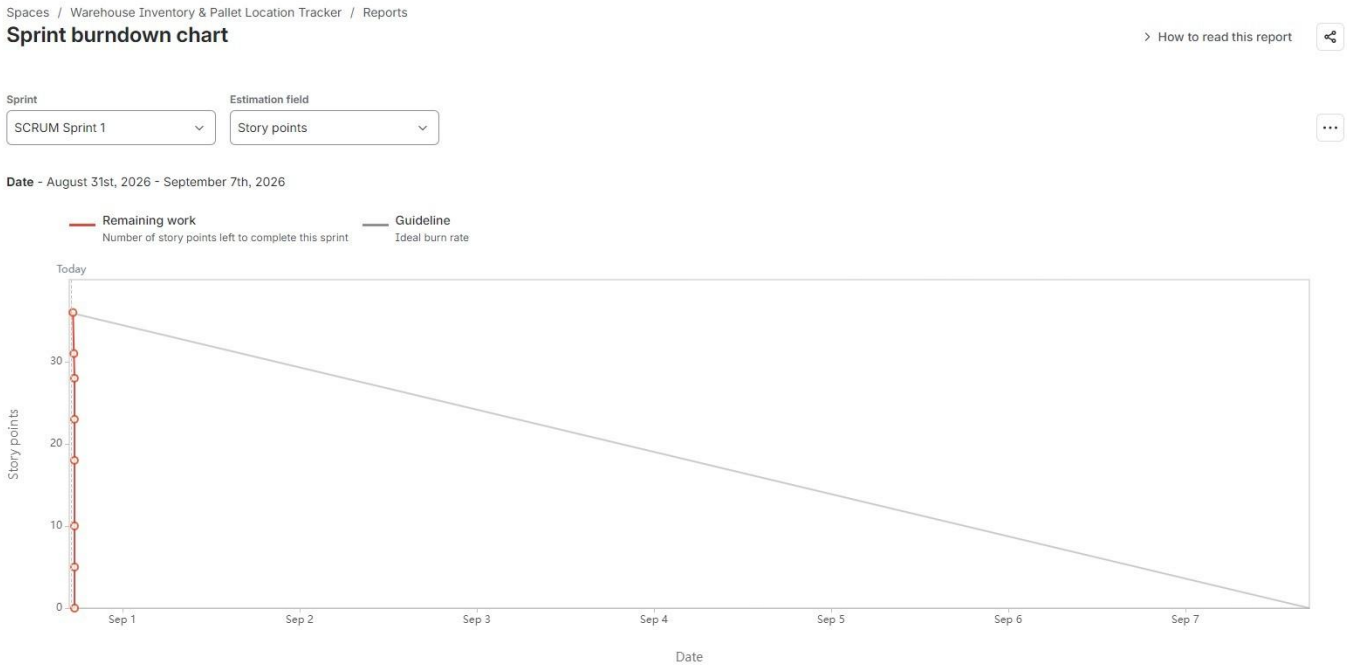

Shows the first sprint board with work items in the To Do column and the workflow columns In Progress, In Review, and Done.

Figure 5 – Sprint Board After Completion

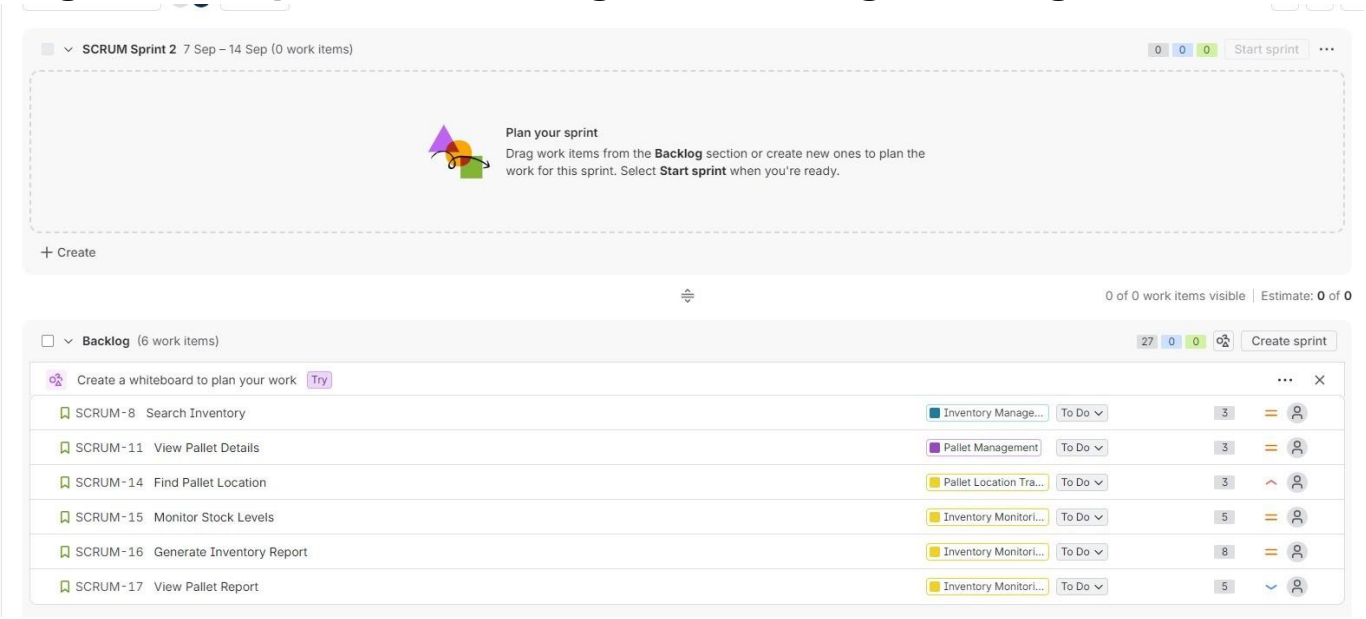

Shows the completed sprint state, with seven work items moved to Done.

Figure 6 – Sprint Burndown Chart

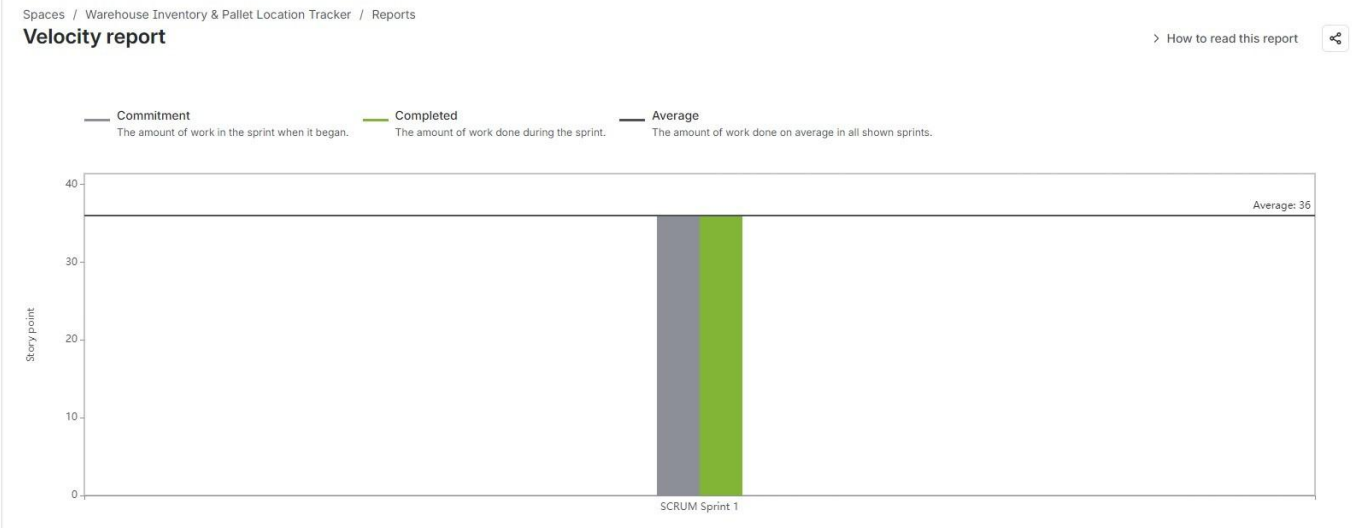

Shows the Sprint 1 burndown report using Story points, including the remaining-work line and ideal guideline.

Figure 7 – Sprint 2 Planning / Remaining Backlog

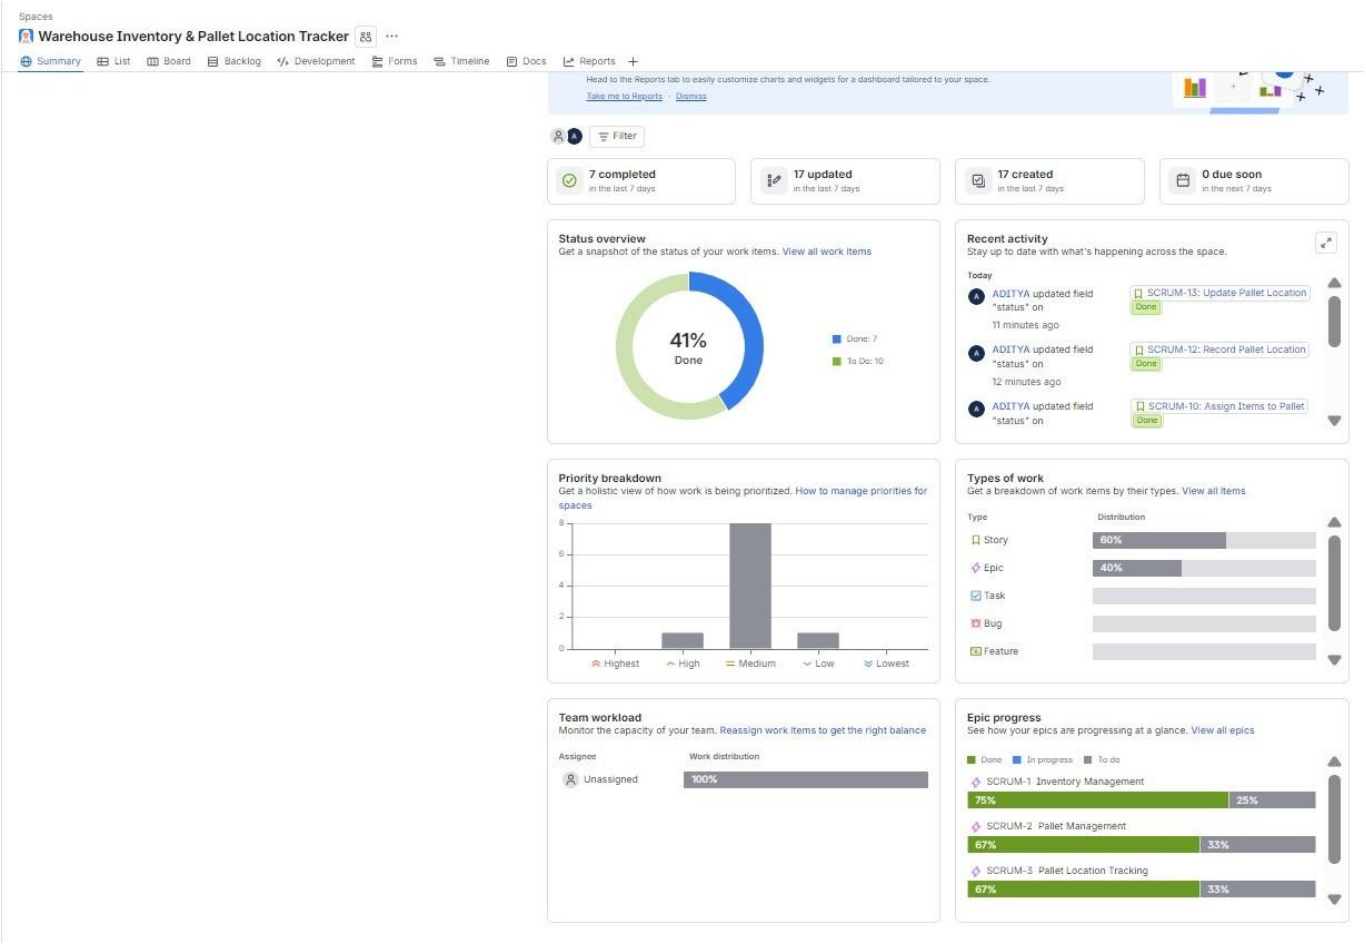

Shows Sprint 2 with zero work items currently planned and the six remaining backlog items available for planning.

Figure 8 – Velocity Report

Shows Sprint 1 commitment and completed work at 36 story points, with the reported average of 36.

Figure 9 – Space Summary Dashboard

Shows overall project status, recent activity, priority breakdown, types of work, team workload, and epic progress.

10. Reflection

Reflection 1 – What did I learn from using Jira?

I learned how Jira can be used to organize a software project into epics and user stories, estimate work using story points, prioritize work, and track each item through a Scrum workflow.

Reflection 2 – How did sprint planning help?

Sprint planning helped separate the available backlog into a defined sprint scope. Moving selected work items into the sprint made the planned work visible and made it easier to monitor progress through the board.

Reflection 3 – What do the reports show?

The burndown chart shows remaining story-point work over the sprint period, while the velocity report compares committed and completed story points. The summary dashboard provides a broader view of status, priorities, work types, workload, and epic progress.

Reflection 4 – What could be improved?

For future sprints, work can be planned with clear ownership, realistic sprint scope, and regular status updates. This would make the reports more representative of day-to-day progress and make future sprint commitments easier to estimate.

Note: This report is assembled from the 9 screenshots uploaded in this conversation. The exact assignment guideline/marking rubric was not included with these uploads, so the report does not claim any requirement that is not visible in the supplied evidence.
